

### Compact Hygiene Station CLEANCONTROL-SL Dual Lane

The CLEANCONTROL-SL is a two-lane facility with separate entry and exit lane. The entry lane is equipped either with a disinfection tray in the ground for the disinfection of the soles of shoes with a drip grate behind it or a brush module. Additionally, the entry control device EK 400 ensures a tamper-proof two hand disinfection. The exit is controlled by a mechanical turnstile.

The variant with the disinfection tray comes with a time-automated release of the cleaning agent.

The machine is disassembled before delivery to make transportation easier. Siphon, joints and gaskets and small parts are not included.

Configuration versions:

CLEANCONTROL-SL B/D (Brush/Disinfection bath)

CLEANCONTROL-SL B/B (Brush/Brush)

Technical data	CLEANCONTROL-SL 1500
Dimensions ((LxDxH)	2110 x 1710 x 1800 mm Brush length 1100 mm
Electrical connection	400 V/N/PE, 50/60 Hz
Power consumption	1,25 kW
Water connection	3/4" max. 43 °C
Water outlet	2 x DN 50
